

# Course Registration System Project Report

Muhammad Bilal Zahid Khan

May 26, 2023

## 1 Introduction

The project started on May 23, 2023, with the following objectives:

- Implement the required changes for re-engineering.
- Design and create sprints in Jira to track the project progress.
- Add meaningful comments in the project code to improve code readability.
- Update the project documentation in Overleaf.
- Upload the changes to GitHub and update the changelog.
- Update the project GitHub page using the WIKI tab.

## 2 Sprint Overview

The new sprint, named "Re-Engineering Sprint," is designed to address the following changes and improvements based on the concept of re-engineering from section 4.2.2:

### 2.1 Adding Meaningful Comments

The following classes were selected for adding multiline meaningful comments and single comments for functions:

1. Admin.java (Figure 1)
2. Student.java (Figure 2)
3. crsMain.java (Figure 3)

### 2.2 Updating Sprint Backlog

The sprint backlog was updated with the new sprints named "CRS updated Admin" and "CRS updated Students." Different issues were assigned to Assignee: Kainat Naeem and Shahzaib Jameel, with Muhammad Bilal Zahid Khan as the Team Leader (Figure 4).

## 2.3 Updating GitHub Repository

To update the GitHub repository, the following steps were performed:

1. Cloned the repository.
2. Added multiline and single comments in the respective classes.
3. Committed and synced the changes (Figure 5).

## 2.4 Updating Overleaf Document

The Overleaf document was updated to reflect the changes made in the project. This report includes the details of the re-engineering sprint, updated sprint backlog, and GitHub repository. Please see the Overleaf document for the complete information.

## 2.5 Updating Project GitHub Page

The project GitHub page was updated using the WIKI tab. It now includes information about Assignment 1 and Assignment 2, along with the names of the group members involved in the project (Figure 6).

# 3 Conclusion

The Re-Engineering Sprint has been successfully executed, incorporating necessary changes and improvements based on the concept of re-engineering. The project documentation in Overleaf, as well as the GitHub repository and page, have been updated accordingly.

## 5 Group Members

The following group members were involved in the project:

- SP20-BSE-020 Muhammad Bilal Zahid Khan (Group Leader)
- SP20-BSE-019 Kainat Naeem
- SP20-BSE-082 Shahzaib Jameel
